

As a successful candidate for the DevOps Engineer position, you believe that a software development project isn't complete until it's successfully delivered to a user and meets their expectations around availability, performance and security. Configuring a software system, setting up the environments the system will be run in, and implementing the processes for deploying the software system are required steps to that successful delivery. You have a strong focus on business outcomes, are comfortable with collaborating with team members through all stages of a project, and can reach across functional borders to get the job done.

As a Dev Ops Engineer at Portland Webworks, you can expect to:

- + work with cutting edge technologies
- + work on a variety of projects ranging in both size and scope
- + deliver high quality solutions across multiple industries
- + work in a dynamic, collaborative environment
- + support our Drupal and Java software development teams
- + automate build and deployment process
- + configure high availability hosting configurations in Amazon Web Services
- + maintain internal software, hardware and networking systems
- + work on security compliance efforts
- + provide some off-hours support

As a DevOps Engineer, you will bring:

- + Strong Linux administration skills
- + A solid understanding of TCP/IP networking, DNS and HTTP
- + A thorough understanding of security best practices
- + Experience with high availability hosting configurations
- + Experience with relational databases such as MySQL, PostgreSQL and Oracle
- + A thorough understanding of Git and other version control systems
- + A positive attitude and strong work ethic
- + An ability to quickly ramp on new technologies and programming languages

Skills that would make you really stand out are:

- + Experience with Jenkins, CircleCI or other build automation and continuous integration systems
- + Experience with high availability hosting configurations using AWS, Google Cloud or Azure
- + Experience with Active Directory, LDAP and SSO solutions

- + Experience with Docker
- + Security training or certifications (CCSP, SSCP, etc.)
- + Experience maintaining Tomcat, Jetty, Glassfish, or other Java Application Servers
- + Experience with automation and configuration management tools

We are a professional consulting company, building custom solutions for a diverse client base. Healthcare, non-profit, eCommerce, retail, and government agencies, are some of the industries we work with. This diversification creates an exciting work experience by presenting software challenges in a variety of business domains and technical environments. The client and tech mix at PWW are ideal for gaining valuable experience and growing your career.

PWW offers generous insurance plans, annual profit sharing (18% on average), and a fun, engaging work environment.
